|--|--------------------|---|------------------------|
| Name   | Mrs. LATIKA KALITA | Patient ID  | 0692507280099          |
| Birthday   | 01-04-1987         | Sample ID   | B3386040               |
| Age at sample date   | 38.3               | Sample Date   | 28-07-2025             |
| Gestational age  | 12 + 4             |   |                        |
| Correction factors   |                    |   |                        |
| Fetuses  | 1                  | IVF   | no                     |
| Weight   | 78.3               | diabetes  | no                     |
| Smoker   | no                 | Origin  | Asian                  |
| Biochemical data   |                    | Ultrasound data   |                        |
| Parameter  | Value              | Corr. MoM   |                        |
| PAPP-A   | 1.17 mIU/mL        | 0.40  | Gestational age 12 + 3 |
| fb-hCG   | 40.48 ng/mL        | 1.06  | Method CRL Robinson    |
| Risks at sampling date   |                    |   |                        |
| Age risk   | 1:123              | Scan date   | 27-07-2025             |
| Biochemical T21 risk   | 1:69               | Crown rump length in mm   | 62.6                   |
| Combined trisomy 21 risk   | 1:439              | Nuchal translucency MoM   | 0.74                   |
| Trisomy 13/18 + NT   | 1:8938             | Nasal bone  | present                |
| Risk   |                    | Sonographer   | NA                     |
| 1:10   |                    | Qualifications in measuring NT  | NA                     |
| 1:100  |                    | Trisomy 21  |                        |
| 1:250  |                    | The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.   |                        |
| 1:1000   |                    | After the result of the Trisomy 21 test (with NT) it is expected that among 439 women with the same data, there is one woman with a trisomy 21 pregnancy and 438 women with not affected pregnancies. |                        |
| 1:10000  |                    | The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.   |                        |
| 13 15 17 19 21 23 25 27 29 31 33 35 37 39 41 43 45 47 49   | Age                | Please note that risk calculations are statistical approaches and have no diagnostic value!   |                        |
| Trisomy 13/18 + NT   |                    | The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).  |                        |
|  |                    | The laboratory can not be held responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!   |                        |
| The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:8938, which represents a low risk. |                    |   |                        |
