Risk			Trisomy 21
1:10			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.
1:100			After the result of the Trisomy 21 test (with NT) it is expected that among 5574 women with the same data, there is one woman with a trisomy 21 pregnancy and 5573 women with not affected pregnancies.
1:250			The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs.
1:1000			The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.
1:10000			Please note that risk calculations are statistical approaches and have no diagnostic value!
Age			The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).
