Impression: USG findings reveal:

- Single live intrauterine gestation of 10w 0d.
- EDD by USG-10.01.2026.

Follow up at 19-21 weeks for target scan for detailed fetal anomaly screening.

I, Dr.MAYANK UJJALIYA, MD, declare that while conducting USG of above patient, I have neither declared nor disclosed the sex of her to anybody in any manner. (It must be noted that detailed fetal anatomy may not always be visible due to technical difficulties relate fetal position, amniotic fluid volume, fetal movements, maternal abdominal wall thickness & tissue echogenicity. Therefore all anomalies may not be detected at every examination. Patient has been counselled about the capabilities & limitations of examination.)
