

Prisca 5.1.0.17
Date of report: 11-08-2025

N A

Patient data			
Name	Mrs. SANGITA BEHERA.		Patient ID
Birthday	04-06-1995	Sample ID	
Age at sample date	30.2	Sample Date	
Gestational age	11 + 2		
Correction factors			
Fetuses	1	IVF	no
Weight	58	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	0.88 mIU/mL	0.37	
fb-hCG	50.37 ng/mL	0.91	
Risks at sampling date			
Age risk		1:602	
Biochemical T21 risk		1:380	
Combined trisomy 21 risk		1:2425	
Trisomy 13/18 + NT		<1:10000	
			Gestational age
			11 + 1
			Method
			CRL Robinson
			Scan date
			04-08-2025
			Crown rump length in mm
			45.7
			Nuchal translucency MoM
			0.72
			Nasal bone
			present
			Sonographer

			Qualifications in measuring NT
			MD
Trisomy 21			
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 2425 women with the same data, there is one woman with a trisomy 21 pregnancy and 2424 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
