

Reg No. : 842/08/25
Name : MR. MOSHLEH UDDIN AHMED
Ref Doctor : Dr. INTEKHAB ALAM.,
Reporting Time : 13-08-2025 12:19 PM

NATURE OF EXAMINATION : USG WHOLE ABDOMEN

LIVER : Liver is enlarged and shows diffuse increase in fine echoes in hepatic parenchyma. A small cyst 14 mm is seen in LLL. There is normal visualization of intrahepatic vessels. No obvious intrahepatic mass lesion is seen. Intrahepatic biliary radicles are not dilated.

G.B. : GB is distended. No echoreflective calculus is seen in GB. **GB wall is mildly thick.**

C.B.D. : CBD measures 7 - 8 mm in width and appears normal. No echoreflective calculus is seen in visualised portion of CBD.

PANCREAS : Pancreas is seen in its entirety and appears echogenic.

SPLEEN : Spleen is normal with normal echotexture.

KIDNEYS : Both kidneys are normal in size, shape, position, contours & echoanatomy. No evidence of calculus or hydronephrosis is seen in both kidneys.

URINARY BLADDER : Bladder is well distended & shows smooth contours. No demonstrable intrinsic pathology is seen.

PROSTATE : Prostate is normal in size with normal echotexture. Prostate measures 39 x 27 x 37 mm & volume is 20 ml.

SEMINAL VESICLES : Seminal Vesicles appear normal.

Moderate ascites is seen in abdomen.
Pleural effusion is seen in right side.

IMPRESSION : 1. HEPATOMEGALY WITH FATTY INFILTRATION (GRADE - I)

1. HEPATOMEGALY WITH FATTY INFILTRATION (GRADE - I)
2. ECHOCOGENIC PANCREAS (SUGGESTIVE OF FATTY PANCREAS).
3. MODERATE ASCITES.
4. RIGHT SIDE PLEURAL EFFUSION.

Please co-relate and evaluate.
