

Prisca 5.1.0.17
Date of report: 22-08-2025

N A

Patient data			
Name	Mrs. RAJASREE		Patient ID
Birthday	14-09-1994	Sample ID	a2291534
Age at sample date	30.9	Sample Date	21-08-2025
Gestational age	12 + 0		
Correction factors			
Fetuses	1	IVF	no
Weight	59	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	3.57 mIU/mL	1.10	Method
fb-hCG	44.28 ng/mL	0.94	Scan date
Risks at sampling date			Crown rump length in mm 56 Nuchal translucency MoM 0.95 Nasal bone unknown Sonographer N A Qualifications in measuring NT MD
Age risk	1:559		
Biochemical T21 risk	1:4971		
Combined trisomy 21 risk	<1:10000		
Trisomy 13/18 + NT	<1:10000		
Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
