| Risk  |    |          | Trisomy 21  |  |      |
|            |    |          | <p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b></p> <p>After the result of the Trisomy 21 test it is expected that among 385 women with the same data, there is one woman with a trisomy 21 pregnancy and 384 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.</p> <p>Please note that risk calculations are statistical approaches and have no diagnostic value!</p> |  |      |
| Trisomy 18  |    |          | Neural tube defects risk  |  |      |
| <p><b>The calculated risk for trisomy 18 is &lt; 1:10000, which indicates a low risk.</b></p> |    |          | <p><b>The corrected MoM AFP (0.62) is located in the low risk area for neural tube defects.</b></p>   |  |      |
