NA

Patient data					
Name	Mrs. T LALITHA		Patient ID	0012508240161	
Birthday	16/08/96		Sample ID	B3101211	
Age at sample date	29.0		Sample Date	23/08/25	
Gestational age	12 + 2				
Correction factors					
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies	unknown
Weight	50	diabetes	no		
Smoker	no	Origin	Asian		
Biochemical data			Ultrasound data		
Parameter	Value	Corr. MoM	Gestational age	12 + 2	
PAPP-A	1.14 mIU/mL	0.23	Method	CRL Robinson	
fb-hCG	41.52 ng/ml	0.94	Scan date	23/08/25	
Risks at sampling date			Crown rump length in mm	59	
Age risk	1:716		Nuchal translucency MoM	0.65	
Biochemical T21 risk	1:101		Nasal bone	present	
Combined trisomy 21 risk	1:734		Sonographer	NA	
Trisomy 13/18 + NT	1:3340		Qualifications in measuring NT	MD	
Risk			Trisomy 21		
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 734 women with the same data, there is one woman with a trisomy 21 pregnancy and 733 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!		
Trisomy 13/18 + NT					
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:3340, which represents a low risk.
