| Patient data  |                             | Ultrasound data   |              |   |
|---|-----------------------------|---|--------------|---|
| Name  | Mrs. KAVITA KUMARI B3480353 | Gestational age   | 17 + 6       |   |
| D.O.B.  | 25/12/99                    | Scan date   | 23/08/25     |   |
| Age at delivery   | 26.1                        | Method  | BPD Hadlock  |   |
| Correction factors  |                             |   |              |   |
| Fetuses   | 1                           | IVF   | no           | Previous trisomy 21 pregnancies unknown |
| Weight in kg  | 67                          | diabetes  | no           |   |
| Smoker  | no                          | Origin  | Asian        |   |
| Risks at term   |                             |   |              |   |
| Age risk at term  | 1:1314                      | Trisomy 21  | 1:3095       |   |
| Overall population risk   | 1:600                       | Trisomy 18  | <1:10000     |   |
| Neural tube defects risk  | <1:10000                    |   |              |   |
| Pregnancy data  |                             | Parameter   | Value        | Corr. MoM                               |
| Sample Date   | 23/08/25                    | AFP   | 34.09 ng/ml  | 0.76                                    |
| Gestational age at sample date  | 17 + 6                      | HCG   | 20357 mIU/ml | 1.03                                    |
| determination method  | BPD Hadlock                 | uE3   | 1.09 ng/ml   | 1.02                                    |
| <b>Risk</b><br>          |                             | <b>Trisomy 21</b><br><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b><br>After the result of the Trisomy 21 test it is expected that among 3095 women with the same data, there is one woman with a trisomy 21 pregnancy and 3094 women with not affected pregnancies.<br>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.<br>Please note that risk calculations are statistical approaches and have no diagnostic value! |              |   |
| <b>Trisomy 18</b><br><b>The calculated risk for trisomy 18 is &lt; 1:10000, which indicates a low risk.</b> |                             | <b>Neural tube defects risk</b><br><b>The corrected MoM AFP (0.76) is located in the low risk area for neural tube defects.</b>   |              |   |
