**RADIOLOGY REPORT :****PLAIN CT SCAN OF ABDOMEN****TECHNIQUE:**

Helical CT acquisition of abdomen was done on Dual source Dual energy 40 slice MDCT scanner & images were reconstructed in axial & coronal planes.

FINDINGS:

Liver is normal in size and attenuation. No focal lesion is seen in liver parenchyma. There is no intrahepatic biliary dilatation. Portal vein is normal in course and calibre. CBD is normal.

Gall bladder is partially distended.

Pancreatic head, body, tail and uncinate process are normal in size and density. No calcification seen. No evidence of any peripancreatic collections. There is no ductal dilatation.

Spleen is normal in size and attenuation. No focal lesions or calcifications in the parenchyma.

Bilateral adrenal glands are normal in size, shape and attenuation.

Both kidneys are normal in size and density. The parenchymal density is normal. No calculi / hydronephrosis noted. Both ureters are normal in course and caliber.

Urinary bladder is over distended. Wall thickness is normal. No obvious calculi seen.

Prostate : Normal in size and density.

Stomach, duodenum and bowel loops are normal.

Ref Unit : --

No evidence of ascites.

There is no evidence of any retroperitoneal adenopathy.

Visualised bones and soft tissues are normal.

The appendix is fluid filled, dilated, maximum diameter measuring ~ 8 mm with mild periappendiceal fat stranding.

IMPRESSION:

- The appendix is fluid filled, dilated with mild periappendiceal fat stranding - suggestive of acute appendicitis.***

Suggested clinical correlation / further evaluation.
