

LABORATORY TEST REPORT

Name	: Mr. BINEET KERKETTA		
Sample ID	: B3033501		
Age/Gender	: 24 Years/Male	Reg. No	: 0472508270075
Referred by	: Dr. NAVEEN KUMAR	SPP Code	: SPI-BH-002
Referring Customer	: KUJUR LAB	Collected On	: 27-Aug-2025 02:00 PM
Primary Sample	: Whole Blood	Received On	: 27-Aug-2025 02:50 PM
Sample Tested In	: Serum	Reported On	: 27-Aug-2025 03:25 PM
Client Address	:	Report Status	: Final Report

CLINICAL BIOCHEMISTRY

Test Name	Results	Units	Biological Reference Interval
Total IgE <small>(Method: CLIA)</small>	1941.9	IU/mL	Upto 160

Interpretation:

- Allergies are a common and chronic condition that involves the body's immune system. Normally, your immune system works to fight off viruses, bacteria, and other infectious agents. When you have an allergy, your immune system treats a harmless substance, like dust or pollen, as a threat. To fight this perceived threat, your immune system makes antibodies called immunoglobulin E (IgE).
- Substances that cause an allergic reaction are called allergens. Besides dust and pollen, other common allergens include animal dander, foods, including nuts and shellfish, and certain medicines, such as penicillin.
- Allergy symptoms can range from sneezing and a stuffy nose to a life-threatening complication called anaphylactic shock. Allergy blood tests measure the amount of IgE antibodies in the blood. A small amount of IgE antibodies is normal. A larger amount of IgE may mean you have an allergy.
