TEST REPORT

NAME: MRS. HAR PRIT KAUR

AGE: 21 YEARS

SEX: F

- ❖ Measured nuchal translucency (2.2 mm) is 65th percentile for present CRL.
- ❖ Three vessel view shows single dilated vessel/aorta with and oblique view shows overriding of vessel/aorta with suspicious perimembranous/subaortic VSD.

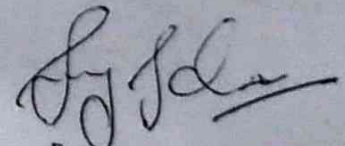

-Finding suggest complex congenital heart disease - likely evolving tetralogy of fallot (TOF).

Suggest:- Early anomaly scan at 16 weeks & amniocentesis to rule out aneuploidy/trisomy association.

DECLARATION:- I Dr. Suraj kabra: Declare that while conducting USG, I have neither detected nor disclosed the sex of her fetus to anybody in any manner.

All measurement including estimated fetal weight are subject to statistical variations.

Thanks for the reference,
