 Prisca 5.1.0.17

NA

| Patient data  |               | Ultrasound data   |              |                                 |
|---|---------------|---|--------------|---------------------------------|
| Name  | Mrs. K.ANUSHA | Gestational age   | 13 + 3       |                                 |
| D.O.B.  | 10/03/05      | Scan date   | 20/08/25     |                                 |
| Age at delivery   | 21.0          | Method  | Scan         |                                 |
| Correction factors  |               |   |              |                                 |
| Fetuses   | 1             | IVF   | no           | Previous trisomy 21 pregnancies |
| Weight in kg  | 46            | diabetes  | no           | unknown                         |
| Smoker  | no            | Origin  | Asian        |                                 |
| Risks at term   |               |   |              |                                 |
| Age risk at term  | 1:1519        | Trisomy 21  | 1:648        |                                 |
| Overall population risk   | 1:600         | Trisomy 18  | <1:10000     |                                 |
| Neural tube defects risk  | <1:10000      |   |              |                                 |
| Pregnancy data  |               | Parameter   | Value        | Corr. MoM                       |
| Sample Date   | 01/09/25      | AFP   | 20.86 ng/ml  | 0.54                            |
| Gestational age at sample date  | 15 + 1        | HCG   | 71111 mIU/ml | 1.54                            |
| determination method  | Scan          | uE3   | 0.42 ng/ml   | 0.82                            |
|                          |               | <b>Trisomy 21</b><br><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b><br>After the result of the Trisomy 21 test it is expected that among 648 women with the same data, there is one woman with a trisomy 21 pregnancy and 647 women with not affected pregnancies.<br>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.<br>Please note that risk calculations are statistical approaches and have no diagnostic value! |              |                                 |
| <b>Trisomy 18</b><br><b>The calculated risk for trisomy 18 is &lt; 1:10000, which indicates a low risk.</b> |               | <b>Neural tube defects risk</b><br><b>The corrected MoM AFP (0.54) is located in the low risk area for neural tube defects.</b>   |              |                                 |
