Patient Name	: Mrs. Rupali Adarsh Pakhale	Age/Sex	: 24 Years/ Female
Ref. By	: Dr. JYOTI SHEVGAN	Date	: 11-Sep-25

OBSTETRIC EARLY DETAILED SCAN

DATING	LMP	GESTATIONAL AGE	EDD
BY LMP	LMP:12-Jun-25	13 weeks 0 days	19-Mar-26
BY USG		12 weeks 3 days	23-Mar-26
AGREED DATING IS BASED ON LMP			

SURVEY:

PLACENTA is **ANTERIOR**.

LIQUOR is adequate.

Umbilical cord - Two arteries and one vein.

Cardiac activity present. Fetal activity present. 170 (H.B.)/min

There is a single gestation sac in uterus with a single fetus within it.

GENETIC MARKERS:

Nasal bone is ossified and appear normal measure

Nuchal translucency is 1.13 mm, [24]th percentile, [normal]

Ductus venosus flow pattern appear normal. No evidence of absence of reversal of 'A' wave.

No evidence of significant tricuspid regurgitation is seen.

The embryonal growth parameters are as follow :

		GA	Percentile	Graph
CRL	5.32 cm	12 weeks 0 days		
BPD	1.88 cm	13 weeks 0 days	21.48 %	
HC	6.50 cm	12 weeks 4 days	4.46 %	
AC	5.27 cm	12 weeks 2 days	30.85 %	
FL	0.63 cm	12 weeks 4 days	6.94 %	
WEIGHT	53.31 g	11 weeks 5 days	1.43 %	
Hands, Limbs, Nasal Triangle Integrity, Bladder, Stomach : Seen				

COLOUR DOPPLER STUDY

Vessels	PI	PI Percentile	Remarks
Uterine artery mean PI	1.29	16 %	Within Normal Limit
DUCTUS VENOSUS	0.60	14 %	Within Normal Limit

Plot No 25, Behind ABC Complex, Opp. District Court, Adalat Road, Near Baba Petrol Pump, Chh. Sambhaji Nagar.

PRESSION:

- Single live intrauterine fetus of 12 weeks 3 days is present.
- Please correlate with dual/triple marker test.

Suggest Detail anomaly scan at 20 - 23 weeks

note that all anomalies can not be detected all the times due to various technical and circumstantial reasons like gestation period, fetal position, quantity of liquor etc. The present study can not completely confirm presence or absence of any or all the congenital anomalies in the fetus which may be detected on post natal period. Growth parameters mentioned herein are based on International Data and may vary from Indian standards. Date of delivery (at weeks) is calculated as per the present sonographic growth of fetus and may not correspond with period of gestation by L.M.P. or by actual date of delivery. With any other diagnostic modality, the present study should be correlated with clinical features for proper management. Except in cases of Fetal Demise or Induced Abortion, sonography at 20-23.

I, Mukundraj Zarikar declare that while conducting ultrasonography of Mrs. Rupali Adarsh Pakhale, I have neither detected nor disclosed sex of her fetus anybody by any manner.

Report with compliments.
