

Prisca 5.1.0.17
Date of report: 17/09/25

N A

Patient data			
Name	Mrs. RAKHI LOKHANDE		Patient ID
Birth day	12/06/00		Sample ID
Age at sample date	25.3		Sample Date
Gestational age	13 + 4		
Correction factors			
Fetuses	1	IVF	no
Weight	68	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	7.39 mIU/mL	1.47	Method
fb-hCG	32.51 ng/mL	1.07	CRL Robinson
Risks at sampling date			Scan date
Age risk			08/09/25
Biochemical T21 risk			Crown rump length in mm
Combined trisomy 21 risk			62
Trisomy 13/18 + NT			Nuchal translucency MoM
			0.50
			Nasal bone
			present
			Sonographer
			N A
			Qualifications in measuring NT
			MD
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
