Patient data				
Name	Mrs. SASMITA NAYAK		Patient ID	0652509220190
Birthday	01-03-2003		Sample ID	B3392761
Age at sample date	22.6		Sample Date	22-09-2025
Gestational age	12 + 6			
Correction factors				
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies
Weight	55	diabetes	no	
Smoker	no	Origin	Asian	
Biochemical data			Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age	12 + 4
PAPP-A	0.43 mIU/mL	0.09	Method	CRL Robinson
fb-hCG	34.52 ng/mL	0.87	Scan date	20-09-2025
Risks at sampling date			Crown rump length in mm	
Age risk	1:1053		63	
Biochemical T21 risk	1:105		Nuchal translucency MoM	
Combined trisomy 21 risk	1:201		1.29	
Trisomy 13/18 + NT	>1:50		Nasal bone	
			present	
			Sonographer	
			N A	
			Qualifications in measuring NT	
			MD	
Trisomy 21				
The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk. After the result of the Trisomy 21 test (with NT) it is expected that among 201 women with the same data, there is one woman with a trisomy 21 pregnancy and 200 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!				
Trisomy 13/18 + NT				
The calculated risk for Trisomy 13/18 test (with nuchal translucency) is >1:50, which indicates an increased risk.
