

Patient's Name: Sarita Mahadu Pawar

Age: 31 Years

Ref: Dr S B Markad

Date: 24-Sep-25

USG OBS NT SCAN

LMP: 02.07.2025

GA by LMP: 12 w 0 d

EDD by LMP: 08.04.2026

GA by USG: 12 w 6 d

EDD by USG: 02.04.2026

Clinical history: NT scan

FINDINGS

A single live intrauterine fetus is seen within the sac.

Fetal heart action present. **FHR: 173 bpm**

CRL - 64.8 mm corresponding to 12 w 6 d

NT measures 1.5 mm

Nasal bone echo is seen.

Ductus venosus flow appears normal.

Placenta is forming posteriorly, placental tip 12 mm from the internal os.

No retroplacental collection.

Amniotic Fluid: Normal.

Cervical length: **35 mm.**

Internal os is closed.

IMPRESSION

Normal first trimester scan.

NT: 1.5 mm, 12 weeks 6 days by scan today.

Suggested for Anomaly scan at 20 weeks.

Declaration by patient: I **Sarita Mahadu Pawar** declare that while undergoing USG I did not want to know the sex of my fetus. (मी हे लिहून देते कि सोनोग्राफी करून, मी माझा बाळाची लिंग तपासणी करू इच्छित नाही.)

Declaration by doctor: I, Dr Avadhoot Jadhav, declare that while conducting ultrasonography/image scanning, I have neither detected nor disclosed the sex of her fetus to anybody in any manner.

(Note: Above usg report is subject to findings evident at the time of scan. The modality has its own limitation & report should be considered as professional opinion. Clinical correlation is advised to arrive at a diagnosis, This report is not valid for CP act & MLC purpose.)
