Trisomy 21								
<b>The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk.</b> <p>After the result of the Trisomy 21 test (with NT) it is expected that among 99 women with the same data, there is one woman with a trisomy 21 pregnancy and 98 women with not affected pregnancies.</p> <p>The PAPP-A level is low.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.</p> <p>Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be held responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>								
Trisomy 13/18 + NT								
<b>The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:2682, which represents a low risk.</b>
