

Prisca 5.1.0.17
Date of report: 27/09/25

N A

Patient data			
Name	Mrs. AARTI AWALE		Patient ID
Birthday	29/09/95	Sample ID	B3843819
Age at sample date	30.0	Sample Date	26/09/25
Gestational age	12 + 1		
Correction factors			
Fetuses	1	IVF	no
Weight	45	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.19 mIU/mL	0.25	12 + 1
fb-hCG	44.85 ng/mL	0.89	Method
			CRL Robinson
			Scan date
			26/09/25
			Crown rump length in mm
			58
			Nuchal translucency MoM
			0.72
			Nasal bone
			present
			Sonographer
			N A
			Qualifications in measuring NT
			MD
Risks at sampling date			
Age risk	1:637		
Biochemical T21 risk	1:132		
Combined trisomy 21 risk	1:930		
Trisomy 13/18 + NT	1:4045		
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 930 women with the same data, there is one woman with a trisomy 21 pregnancy and 929 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:4045, which represents a low risk.
