Date of report: 27-09-2025

N A

Patient data			
Name	Mrs. SHIFA		Patient ID
Birthday	14-01-2001	Sample ID	
Age at sample date	24.7	Sample Date	
Gestational age	12 + 3		
Correction factors			
Fetuses	1	IVF	no
Weight	78	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	0.49 mIU/mL	0.18	
fb-hCG	44.01 ng/mL	1.11	
Risks at sampling date			
Age risk		1:970	
Biochemical T21 risk		1:57	
Combined trisomy 21 risk		1:302	
Trisomy 13/18 + NT		1:794	
		Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 302 women with the same data, there is one woman with a trisomy 21 pregnancy and 301 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
		Trisomy 13/18 + NT The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:794, which represents a low risk.
