

N A

Patient data								
Name	Mrs. ARTI SHARMA	Patient ID	0382509290119					
Birthday	13-08-1990	Sample ID	B3578685					
Age at sample date	35.1	Sample Date	29-09-2025					
Gestational age	13 + 1							
Correction factors								
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies	unknown			
Weight	70	diabetes	no					
Smoker	no	Origin	Asian					
Biochemical data								
Parameter	Value	Corr. MoM	Ultrasound data					
PAPP-A	0.73 mIU/mL	0.17	Gestational age 12 + 6					
fb-hCG	36.52 ng/mL	1.07	Method CRL Robinson					
Risks at sampling date								
Age risk	1:270		Scan date 27-09-2025					
Biochemical T21 risk		>1:50	Crown rump length in mm 68					
Combined trisomy 21 risk		1:134	Nuchal translucency MoM 0.64					
Trisomy 13/18 + NT		1:348	Nasal bone present					
Sonographer N A								
Qualifications in measuring NT MD								
Trisomy 21								
The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk. <p>After the result of the Trisomy 21 test (with NT) it is expected that among 134 women with the same data, there is one woman with a trisomy 21 pregnancy and 133 women with not affected pregnancies.</p> <p>The PAPP-A level is low.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.</p> <p>Please note that risk calculations are statistical approaches and have no diagnostic value!</p> <p>The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).</p> <p>The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!</p>								
Trisomy 13/18 + NT								
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:348, which represents a low risk.
