Surgical Pathology Report

- Clinical History :**

C/O Bilateral ovarian mass - Complex solid cystic mass. CA 125 - > 5000 IU/ml

- Specimen :**

Biopsy from ovarian mass for HPE.

- Gross :**

Received in formalin is specimen labeled as " Biopsy from ovarian mass" consisting of multiple grey white tissue bits together aggregating to 1cc in volume. All processed in single cassette.

- Microscopy :**

Biopsy from ovarian mass shows tumor composed of cells arranged in solid, papillary and glandular pattern. Cells are columnar with high N:C ratio with hyperchromatic, pleomorphic nuclei, at places showing prominent nucleoli. Occasional atypical mitoses noted. Areas of necro-inflammation noted.

Impression : Ovarian mass; Biopsy:

Suggestive of Serous carcinoma - High grade.
