

Prisca 5.1.0.17
Date of report: 11-10-2025

NA

Patient data				
Name	Mrs. ROSHANI VISHAL RANDIVE		Patient ID	0662510100148
Birthday	26-02-2006		Sample ID	A1680133
Age at sample date	19.6		Sample Date	10-10-2025
Gestational age	12 + 5			
Correction factors				
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies
Weight	56	diabetes	no	
Smoker	no	Origin	Asian	
Biochemical data			Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age	12 + 4
PAPP-A	1.05 mIU/mL	0.23	Method	CRL Robinson
fb-hCG	39.03 ng/mL	0.95	Scan date	09-10-2025
Risks at sampling date			Crown rump length in mm	
Age risk	1:1100		64	
Biochemical T21 risk	1:136		Nuchal translucency MoM	
Combined trisomy 21 risk	1:855		0.91	
Trisomy 13/18 + NT	1:3609		Nasal bone	
			present	
			Sonographer	
			NA	
			Qualifications in measuring NT	
			NA	
Risk			Trisomy 21	
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 855 women with the same data, there is one woman with a trisomy 21 pregnancy and 854 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT				
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:3609, which represents a low risk.
