COMMENTS:

First Trimester Screening for Trisomies:

Risks from History
 Trisomy 21: 1 in 930
 Trisomy 13/18: 1 in 1700
 The risk from history is based on a maternal age of 23 years and previous affected pregnancies.
 Risks from History, NT
 Trisomy 21: 1 in 4900
 Trisomy 13/18: 1 in 6000
 The adjusted risk is the risk at the time of screening. The calculation is based on the background risk and the following parameters: Ultrasound factors (NT).

SUGGEST:

- 1) Double marker test today.
- 2) TIFFA (level II) scan between 18-20 weeks.

Thanks for the reference,
 With regards.

Please Note: All abnormalities and genetic syndromes cannot be ruled out by ultrasound examination. Ultrasound examination has its own limitations. Some abnormalities evolve as the gestation advances. The pickup rate of abnormality depends on gestational age of the fetus, fetal position, tissue penetration of sound waves, and patient's body habitus.

Disclaimer: I Dr. Manoj B. Jadhav declare that while conducting ultrasonography/image scanning on this patient, have neither detected nor disclosed the sex of her fetus to anybody in any manner.
