

Prisca 5.1.0.17
Date of report: 13/10/25

NA

Patient data			
Name	Mrs. ANTIMA SHARMA	Patient ID	0442510120015
Birthday	16/12/90	Sample ID	b3779788
Age at sample date	34.8	Sample Date	12/10/25
Gestational age	13 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	67	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.43 mIU/mL	0.25	13 + 5
fb-hCG	27.95 ng/mL	1.00	Method
			CRL Robinson
			Scan date
			11/10/25
			Crown rump length in mm
			79.6
			Nuchal translucency MoM
			1.09
			Nasal bone
			present
			Sonographer
			NA
			Qualifications in measuring NT
			NA
Risks at sampling date			
Age risk		1:296	
Biochemical T21 risk		>1:50	
Combined trisomy 21 risk		1:185	
Trisomy 13/18 + NT		1:1090	
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk. After the result of the Trisomy 21 test (with NT) it is expected that among 185 women with the same data, there is one woman with a trisomy 21 pregnancy and 184 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:1090, which represents a low risk.
