

Patient Name : MRS. S SHIVAMMA

Patient Id/ Bil No. : 2510-0213

Gender/Age : Female /32 Years

Reg. Date : 08-10-2025

Referred By : DR PRASHANTHY EDWARDS (84534)

Reported Date : 10-10-2025

---

**DEPARTMENT OF RADIODIAGNOSIS AND IMAGING**  
**SONOMAMMOGRAPHY OF BOTH BREASTS**

**Clinical history : Check up..**

**Technique:** Ultrasound scan of breasts was performed with 7.5 MHz linear array transducer.

**Findings:**

Well defined irregular spiculated heterogenous hypoechoic lesion measuring 48 x 29 x 37 mm noted in the retro areolar region of left breast at 4-5 o'clock extending into periareolar regio. There is increased internal vascularity. The lesion is extending into the pre-mammary space. Few enlarged left axillary lymphonodus noted largest measuring 18 x 15mm.

Both breasts reveal predominantly fibroglandular parenchymal pattern with scanty fatty components.

No discrete focal mass/ collection / inflammatory changes noted.

No evidence of dilated ducts.

Pre mammary, mammary and retromammary spaces are normal.

Both nipples, skin and subcutaneous tissues appear normal.

Right axillary regions appear normal. Visualized pectoralis muscles appear normal.

Few bilateral axillary lymph nodes noted with preserved benign morphology. No necrosis / matting / lymphadenitis.

**IMPRESSION:**

- **F/s/o BIRADS IV lesion in left breast- Suspicious of malignancy.**  
**Differential: ORganised hematoma**
- **Suggested clinical / FNAC correlation.**
