

Prisca 5.1.0.17
Date of report: 28/10/25

N A

Patient data			
Name	Mrs. B.SWATHI		Patient ID
Birth day	04/11/99		Sample ID
Age at sample date	26.0		Sample Date
Gestational age	13 + 5		
Correction factors			
Fetuses	1	IVF	no
Weight	46	diabetes	no
Smoker	no	Origin	Asian
			Previous trisomy 21 pregnancies
			unknown
Biochemical data			Ultrasound data
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	3.01 mIU/mL	0.36	13 + 4
fb-hCG	32.85 ng/mL	0.98	Method
			CRL Robinson
			Scan date
			26/10/25
			Crown rump length in mm
			79.2
			Nuchal translucency MoM
			0.84
			Nasal bone
			present
			Sonographer
			N A
			Qualifications in measuring NT
			MD
Risks at sampling date			Trisomy 21
Age risk	1:952		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 2944 women with the same data, there is one woman with a trisomy 21 pregnancy and 2943 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Biochemical T21 risk	1:467		
Combined trisomy 21 risk	1:2944		
Trisomy 13/18 + NT	<1:10000		
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
