

Patient data			
Name		Mrs. M.YASASWI	Patient ID
0902510290040			
Birthday		15-09-1993	Sample ID
A1978582			
Age at sample date		32.1	Sample Date
29-10-2025			
Gestational age		12 + 1	
Correction factors			
Fetuses	1	IVF	no
Weight	63	diabetes	no
Smoker	no	Origin	Asian
Previous trisomy 21 pregnancies		unknown	
Biochemical data			Ultrasound data
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.26 mIU/mL	0.40	12 + 1
fb-hCG	43 ng/mL	0.96	Method
Risks at sampling date			CRL Robinson
Age risk	1:468		29-10-2025
Biochemical T21 risk	1:316		Scan date
Combined trisomy 21 risk	1:1879		Crown rump length in mm
Trisomy 13/18 + NT	<1:10000		58.21
Risk			Nuchal translucency MoM
1:10			0.87
1:100			Nasal bone
1:250			present
1:1000			Sonographer
1:10000			NA
Cut off			Qualifications in measuring NT
Age			NA
Trisomy 21			
The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 1879 women with the same data, there is one woman with a trisomy 21 pregnancy and 1878 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
