Risks at sampling date			
Age risk	1:1084	Gestational age	12 + 3
Biochemical T21 risk	1:120	Method	CRL Robinson
Combined trisomy 21 risk	1:896	Scan date	27-10-2025
Trisomy 13/18 + NT	>1:50	Crown rump length in mm	61.9
		Nuchal translucency MoM	0.38
		Nasal bone	present
		Sonographer	NA
		Qualifications in measuring NT	NA
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 896 women with the same data, there is one woman with a trisomy 21 pregnancy and 895 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 test (with nuchal translucency) is >1:50, which indicates an increased risk.
