

Prisca 5.1.0.17
Date of report: 03/11/25

N A

Patient data						
Name	Mrs. MISBA FATIMA AFSANA KHAN		Patient ID	0372511020071		
Birthday	01/01/91		Sample ID	B3994649		
Age at sample date	34.8		Sample Date	02/11/25		
Gestational age	13 + 1					
Correction factors						
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies		
Weight	54	diabetes	no			
Smoker	no	Origin	Asian			
Biochemical data			Ultrasound data			
Parameter	Value	Corr. MoM	Gestational age	13 + 0		
PAPP-A	1.96 mIU/mL	0.34	Method	CRL Robinson		
fb-hCG	36.52 ng/mL	0.98	Scan date	01/11/25		
Risks at sampling date			Crown rump length in mm			
Age risk	1:288		69.4			
Biochemical T21 risk	1:123		Nuchal translucency MoM			
Combined trisomy 21 risk	>1:50		1.20			
Trisomy 13/18 + NT	1:2744		Nasal bone			
			absent			
			Sonographer			
			N A			
			Qualifications in measuring NT			
			MD			
Risk			Trisomy 21			
			The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk. After the result of the Trisomy 21 Test (with nuchal translucency), it is expected that among less than 50 pregnancies with the same data, there is one trisomy 21 pregnancy. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT						
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:2744, which represents a low risk.
