

Name	: Y RAMESH		
Sample ID	: B3287468		
Age/Gender	: 46 Years/Male	Reg. No	: 0012510010227
Referred by	: Dr. SELF	SPP Code	: SPL-ST5-097
Referring Customer	: SHIVA SAI POLY CLINIC	Collected On	: 01-Oct-2025 09:30 PM
Primary Sample	:	Received On	: 01-Oct-2025 09:33 PM
Sample Tested In	: Tissue	Reported On	: 06-Oct-2025 04:18 PM
Client Address	: Near Ambedkar Statue , Boduppall	Report Status	: Final Report

## HISTOPATHOLOGY

### BIOPSY-Small Specimen (< 2cm)

**Histopathological Number** : HP 9093/2025

**Site of Biopsy** : Left lateral of tongue

**Gross Examination** : Received three grey white to grey brown soft tissue bits altogether measuring 0.7 x 0.3 x 0.2 cm. A/E in one block.

**Microscopic Examination** : Sections studied are lined by hyperplastic keratinized stratified squamous epithelium with marked acanthosis, loss of polarity and features of moderate to severe dysplasia with nucleomegaly, pleomorphic, hyperchromatic nuclei with prominent nucleoli. The epithelium shows endophytic growth with invasion into underlying stroma with nests, lobules and cords of tumor cells, dyskeratosis, keratin pearl formation, non-specific inflammatory infiltrates and focal areas of coagulative necrosis.

**Impression** : Histopathological features are suggestive of Squamous cell carcinoma, moderately differentiated.

**Note** : All biopsy specimen will be stored for 15 (fifteen) days, blocks and slides for 10 (ten) years only from the time of receipt at the laboratory. No request will be entertained after the specified period.
