TISSUE BIOPSY (SMALL PIECE)

TISSUE BIOPSY (SMALL PIECE)

BIOPSY NO.

H/750/25

SPECIMEN

CORE BIOPSY FROM RIGHT HEPATIC LOBE MASS LESION

GROSS EXAMINATION

Received multiple core tissue pieces measuring 0.4 x 0.3 x 0.2 cms.

MICROSCOPIC EXAMINATION

Core biopsy shows atypical cells in the form of nests, trabeculae and singly lying showing pleomorphism, high nuclear- to- cytoplasm ratio, hyperchromatic vesicular nucleus with prominent nucleoli and have foamy cytoplasm. Mitotic figures and few bizarre cells are also seen. Surrounding liver tissue shows necrosis.

IMPRESSION

POSITIVE FOR ATYPICAL CELLS.

NOTE

Please correlate clinically & radiologically.

Advise

IHC is recommended for confirmation.
