

Prisca 5.1.0.17
Date of report: 08/11/25

N A

Patient data					
Name	Mrs. HARSHADA NIKUMBH		Patient ID	0662511060079	
Birthday	01/12/92		Sample ID	B4290704	
Age at sample date	32.9		Sample Date	06/11/25	
Gestational age	12 + 4				
Correction factors					
Fetuses	1	IVF	no	Previous trisomy 21 pregnancies	unknown
Weight	74	diabetes	no		
Smoker	no	Origin	Asian		
Biochemical data			Ultrasound data		
Parameter	Value	Corr. MoM	Gestational age	12 + 3	
PAPP-A	1.08 mIU/mL	0.34	Method	CRL Robinson	
fb-hCG	40.36 ng/mL	1.04	Scan date	05/11/25	
Risks at sampling date			Crown rump length in mm	62	
Age risk	1:413		Nuchal translucency MoM	0.94	
Biochemical T21 risk	1:156		Nasal bone	present	
Combined trisomy 21 risk	1:857		Sonographer	N A	
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT	MD	
Risk			Trisomy 21		
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 857 women with the same data, there is one woman with a trisomy 21 pregnancy and 856 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!		
Trisomy 13/18 + NT					
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
