

Patient data			
Name	Mrs. BHARTI Fetus-A	Patient ID	0382511090030
Birthday	09-07-1998	Sample ID	B3575312 Fetus-A
Age at sample date	27.3	Sample Date	09-11-2025
Gestational age	13 + 5		
Correction factors			
Fetuses	2	IVF	no
Weight	48	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	5.19 mIU/mL	0.35	Gestational age 13 + 4
fb-hCG	30.94 ng/mL	0.43	Method CRL Robinson
Risks at sampling date			Scan date 08-11-2025
Age risk	1:872		Crown rump length in mm 78
Biochemical T21 risk	1:2058		Nuchal translucency MoM 0.53
Combined trisomy 21 risk	<1:10000		Nasal bone present
Trisomy 13/18 + NT	1:7535		Sonographer NA
Risk			Qualifications in measuring NT NA
			Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The PAPP-A level is low. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:7535, which represents a low risk.
