### OBSTETRIC ULTRASOUND (TAS) NT SCAN

Clinical profile:-

LMP-03/08/2025      GA by LMP is 13 weeks 6 days

Findings:

- Uterus is gravid and shows, single well defined intra uterine gestational sac with fetal pole of CRL measuring 68 mm corresponding to estimated gestational age of 13 weeks 1 days.
- Ductus venosus flow is normal.
- Mean PI of uterine artery is 1.75
- Placenta is fundal.
- Fetal heart activity is present. Fetal heart rate is 150 bpm.
- Internal os is closed. Cervical length is 38 mm.
- No obvious collection or sub chorionic bleed is noted around the sac.
- Foetal nuchal translucency measures 2.4 mm and normal for age.
- Foetal nasal bone seen.
- EDD by USG is 15/05/2026

IMPRESSION:

- Single, live, early intra uterine pregnancy of average gestational age of 13 weeks 1 day +/- 1 week by USG.

Advise: - Correlation with serum double marker test with Follow up at 18-22 weeks for anomaly scan.

Declaration of doctor:-

I, Dr. Sandeep Ghuge the undersigned hereby declare that while conducting ultrasound on Mrs Shweta Rahul Sonwane, I have neither detected nor disclosed the sex of the fetus to anyone in any manner.
