Patient Name: MRS PREETI PRABHAKAR SINGH	Date: 11/11/2025
Patient Id: 62754	Age/Sex: 32 Years / FEMALE
Ref Phy: DR. KRITI SHRIVASTAVA MS DNB	

Examination : Obstetric USG of First Trimester Scan Report (Level -1)

Dating	LMP	GA		EDD
		Weeks	Days	
By LMP	LMP: 20/08/2025	11	6	27/05/2026
By USG		12	2	24/05/2026
AGREED DATING IS (BASED ON Biometry)				

Single live intrauterine gestation

OBSTETRIC USG STUDY

Fetus : Single
Fetal Movement : Adequate
FCA : 162/ bpm regular
Liquor : Normal
Placenta : Posterior

Biometry (Headlock)

CRL	55.6 mm	12weeks 2 days
CERVIX	45mm in length with closed os & canal.	

Aneuploidy markers :

Nuchal Translucency	0.8 mm	Normal	10% 
Both Nasal Bones	1.7 mm	Normal	
Umbilical cord	3 vessels		
Tricuspid flow	NO TR		
Ductus venosus	Normal continuous forward flows.		

Fetal anatomy :

Head :	shape & size normal , Neck: normal , Spine: normal, Choroid plexus , Cerebral peduncles ,intracraniallucency , AD normal.
Face:	Orbits, lenses, PMT, mandible gap sign normal.
Thorax:	Lung parenchyma , CT ratio , diaphragm normal.
Abdomen :	Normal ant. Abdominal wall & cord insertion , stomach , bowel loops, Kidneys , UB are normal.
Extremities:	Both upper & lower limbs are normal. Hands , feet seen.
Fetal spine :	Normal.

Vessels	S/D	RI	PI	PI Percentile	Remarks
Right Uterine Artery	2.27	0.56	0.86	0.97%	No early Diastolic notch seen
Left Uterine Artery	2.92	0.66	1.22	10.1%	No early Diastolic notch seen
Mean Uterine Artery			1.04	3.5%	
Ductus venosus	3.46	0.71	1.2		PSV=22.2 Normal waveform Pattern

Impression :- Single live Intrauterine gestation corresponding to a gestational age of 12 Wks 2 days Gestational age assigned as per biometry (CRL)

Maternal: A Type 5 myoma of app: 19x18x15mm size posterior wall at the fundus.

Please note that all anomalies can not be detected all the times due to various technical and circumstantial reasons like gestation period, fetal position, quantity of liquor etc. The present study can not completely confirm presence or absence of any or all the congenital anomalies in the fetus which may be detected on post natal period. Growth parameters mentioned herein are based on International Data and may vary from Indian standards. Date of delivery (at 40 weeks) is calculated as per the present sonographic growth of fetus and may not correspond with period of gestation by L.M.P. or by actual date of delivery. As with any other diagnostic modality, the present study should be correlated with clinical features for proper management. Except in cases of Fetal Demise or Missed Abortion, sonography at 20-22 weeks should always be advised for better fetal evaluation and also for base line study for future reference.

Declaration of Doctor/Person conducting ultrasonography/image scanning

I, **DR SUPRIYA MAHESHWARI** declare that while conducting sonography on **MRS PREETI PRABHAKAR SINGH**, I have neither detected nor disclosed the sex of the fetus to anybody in any manner.
