Risks at sampling date			Trisomy 21
Age risk		1:444	The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.
Biochemical T21 risk		1:143	After the result of the Trisomy 21 test (with NT) it is expected that among 891 women with the same data, there is one woman with a trisomy 21 pregnancy and 890 women with not affected pregnancies.
Combined trisomy 21 risk		1:891	The PAPP-A level is low.
Trisomy 13/18 + NT		1:5487	The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.
			Please note that risk calculations are statistical approaches and have no diagnostic value!
			The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).
			The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:5487, which represents a low risk.
