Disclaimer

I Dr. Chaitanya Joshi declare that while conducting Ultrasonography/Image scanning on Mrs. TEJASHRI GAURAV NARKE, I have neither detected nor disclosed sex of her fetus to anybody in any manner.

Note : All congenital anomalies are not detected by sonography. Only structural anomalies are detected by sonography. Isolated cleft palate, small tracheoesophageal fistula and small VSDs (< 3 mm) are rarely detected on antenatal ultrasound. No finger counting done. Some complex cardiac, CNS, ear, hand, foot and some complex chromosomal anomalies cannot be detectable by USG all the time and are subject to foetal position, liquor, anterior abdominal wall thickness.
