23Y /F DATE :- 17/11/2025

USG OBSTETRICS NT SCAN

LIMITED SCAN DUE TO OVERLYING OBESITY AND POOR SOUND PENETRATION.
Real time B mode ultrasonography done with curvilinear and volume probe.

L.M.P :- 12/08/2025

E.G.A. :- 13WK6D

E.D.D. by L.M.P. :- 19/05/2026

EDD BY USG:28/05/2025

A single intrauterine fetus is seen.

Fetal Cardiac and somatic activity seen. FHR is 160 BPM.

Fetal tiny limbs , stomach and developing spine noted.

CRL: 60.9 corresponds to **12 weeks 4 day**.

NT: 1.8mm normal , nasal bone seen.

Cervical length:3.1cm

Placenta developing on anterior aspect . Internal OS is closed

Other Associated soft markers:

Normal ductus venosus flow noted. No Tricuspid regurgitation is seen.

No obvious maxillary shortening, seen. No obvious mega-cystis is seen.

Umbilical cord attachment at anterior abdominal wall appears normal. No omphalocele is seen.

OPINION :

- Single live intrauterine fetus of gestational age 12weeks 4 days.
- NT within normal limits. Nasal bone seen. Correlate with double marker.
- Suggested anomaly scan at 19- 20wk

I dr. Rahul Agale declare that while performing sonography I have neither detected nor disclosed the sex of fetus to anybody in any manner.

Thanks for referral. With regards.

Dr. Rahul Agale
