

Prisca 5.1.0.17
 Date of report: 03-12-2025

Patient data					
Name	Mrs. ASHIMA MAHALIK TWIN A		Patient ID	0652511290187	
Birthday	25-03-2001		Sample ID	B4052735 TWIN A	
Age at sample date	24.7		Sample Date	29-11-2025	
Gestational age	13 + 2				
Correction factors					
Fetuses	2	IVF	no	Previous trisomy 21 pregnancies	unknown
Weight	70	diabetes	no		
Smoker	no	Origin	Asian		
Biochemical data			Ultrasound data		
Parameter	Value	Corr. MoM	Gestational age	13 + 1	
PAPP-A	4.34 mIU/mL	0.53	Method	CRL Robinson	
fb-hCG	35.74 ng/mL	0.50	Scan date	28-11-2025	
Risks at sampling date			Crown rump length in mm	72.1	
Age risk	1:999		Nuchal translucency MoM	0.89	
Biochemical T21 risk	1:5721		Nasal bone	present	
Combined trisomy 21 risk	<1:10000		Sonographer	NA	
Trisomy 13/18 + NT	<1:10000		Qualifications in measuring NT	Sonographer	
Risk			Trisomy 21		
			The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The risk for this twin pregnancy has been calculated for a singleton pregnancy with corrected MoMs. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!		
Trisomy 13/18 + NT					
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
