

Prisca 5.1.0.17
Date of report: 06-12-2025

Patient data			
Name	Mrs. NUPUR DAS		Patient ID
Birthday	08-01-1991		Sample ID
Age at sample date	34.9		Sample Date
Gestational age	11 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	61	diabetes	no
Smoker	no	Origin	Asian
			Previous trisomy 21 pregnancies
			unknown
Biochemical data			Ultrasound data
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	0.25 mIU/mL	0.09	Method
fb-hCG	47.87 ng/mL	0.99	CRL Robinson
			Scan date
			29-11-2025
			Crown rump length in mm
			52.8
			Nuchal translucency MoM
			0.71
			Nasal bone
			present
			Sonographer
			NA
			Qualifications in measuring NT
			Sonographer
Risks at sampling date			
Age risk		1:271	
Biochemical T21 risk		>1:50	
Combined trisomy 21 risk		1:157	
Trisomy 13/18 + NT		>1:50	
Risk Age Trisomy 21 The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk. After the result of the Trisomy 21 test (with NT) it is expected that among 157 women with the same data, there is one woman with a trisomy 21 pregnancy and 156 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 test (with nuchal translucency) is >1:50, which indicates an increased risk.
