

Prisca 5.1.0.17
Date of report: 07-12-2025

Patient data			
Name	Mrs. K KRISHNA VENI		Patient ID
Birthday	16-12-1998		Sample ID
Age at sample date	27.0		Sample Date
Gestational age	13 + 0		
Correction factors			
Fetuses	1	IVF	no
Weight	60	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	1.71 mIU/mL	0.36	Method
fb-hCG	36.57 ng/mL	0.98	Scan date
Risks at sampling date			Trisomy 21
Age risk	1:875		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.
Biochemical T21 risk	1:421		After the result of the Trisomy 21 test (with NT) it is expected that among 2738 women with the same data, there is one woman with a trisomy 21 pregnancy and 2737 women with not affected pregnancies.
Combined trisomy 21 risk	1:2738		The PAPP-A level is low.
Trisomy 13/18 + NT	<1:10000		The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.
			Please note that risk calculations are statistical approaches and have no diagnostic value!
			The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).
			The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
