Prisca 5.1.0.17

| Patient data   |                                 | Ultrasound data  |             |
|--|---------------------------------|--|-------------|
| Name   | Mrs. SUBHASHMITA SAHOO B3872302 | Gestational age at sample date   | 13 + 4      |
| Birthday   | 01-01-1998                      | Method   | Scan        |
| Age at sample date   | 27.9                            | Scan date  | 03-12-2025  |
| Patient ID   | 0652512030129                   |  |             |
| Correction factors   |                                 |  |             |
| Fetuses  | 1                               | IVF  | no          |
| Weight in kg   | 56                              | diabetes   | no          |
| Smoker   | no                              | Origin   | Asian       |
|  |                                 | Previous trisomy 21 pregnancies  | unknown     |
| Pregnancy data   |                                 | Parameter  | Value       |
| Sample Date  | 03-12-2025                      | PAPP-A   | 5.06mIU/mL  |
|  |                                 | fb-hCG   | 32.46 ng/mL |
|  |                                 |  | 0.80        |
|  |                                 |  | 1.00        |
| Risks at sampling date   |                                 |  |             |
| Age risk at sampling date  | 1:829                           | Trisomy 21   | 1:3127      |
| Overall population risk  | 1:600                           | Trisomy 13/18  | <1:10000    |
| Risk   |                                 | Trisomy 21   |             |
|  |                                 | <p><b>The calculated risk for Trisomy 21 is below the cut off which represents a low risk.</b></p> <p>After the result of the Trisomy 21 test it is expected that among 3127 women with the same data, there is one woman with a trisomy 21 pregnancy and 3126 women with not affected pregnancies.</p> <p>The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!</p> |             |
| Trisomy 13/18  |                                 |  |             |
| <p><b>The calculated risk for trisomy 13/18 is &lt; 1:10000, which indicates a low risk.</b></p> |                                 |  |             |
