SONOGRAPHY • 3D - 4D • COLOUR DOPPLER • 2 D - ECHO • DIGITAL X- RAY

Kohinoor Majestic, 1st Floor, Above Suman Super Market,
Behind Kundan Hyundai Showroom, Near Thermax Chowk, Chinchwad, Pune 411 019.

Ph. No.: 7722093930 / 9960406686

Timings : Mon to Sat - 9 am to 8:30 pm.

R. HARSHAD ADIK MD-Radio(Mum)

DR. ASHISH ADSULE MD-Radio(Mum), FRCR (UK)

DATE : 06 DEC 2025

NAME : MRS. KAMBLE NEHA

REF. BY : DR. MALEKAR S. S.

Thorax:

Both lungs appear normal without obvious focal lesion.

Normal situs is detected. Aberrant right subclavian artery is noted.

The heart occupies 1/3rd of chest cavity.

The four chambers of heart, right and left ventricular outflow tracts and the aortic arch appear normal.

There is no pericardial or pleural effusion.

Abdomen:

The stomach bubble appears normal.

No abnormal dilatation of bowel loops is seen.

Fetal kidneys and urinary bladder appear normal.

Domes of diaphragm appear normal.

The ventral abdominal and thoracic wall appears intact.

Limbs:

Visualised parts of all limbs appear normal in morphology and mineralization.

There is no evidence of club foot.

Umbilical cord:

The umbilical cord shows 3 vessels. Its fetal insertion appears normal.

No soft markers of aneuploidy like hypoplastic / absent nasal bone, choroid plexus cyst, thick nuchal fold, ventriculomegaly, echogenic intracardiac focus, pyelectasis, echogenic bowel, short femur / humerus are detected at present.

CONCLUSION:

- Single live intrauterine foetus of approximate gestational age of 19 weeks in cephalic presentation.
- No obvious structural anomaly is detected.
- Aberrant right subclavian artery.

Suggest: Follow up USG at 24 weeks.

Many thanks for the reference,

DR. ASHISH ADSULE

MD Radio-Diagnosis, FRCR (London)

I declare that during the examination, I have neither detected nor disclosed the sex of the foetus to any body in any manner. (Structural anomalies can be detected on sonography depending upon various factor like gestational age, fetal position, amount of liquor, maternal abdominal wall thickness, patient co-operation etc.)

I declare that by undergoing ultrasonography / image scanning etc. I do not want to know the sex of my foetus.

रुप्यात येणारी सोनोग्राफी ही गर्भलिंग निदानासाठी नाही याची मला जाणीव आहे. यासाठी मी स्वच्छतेने संमती देत आहे.

OBSTETRIC USG – ANOMALY SCAN

Uterus is gravid. A single live intrauterine fetus is seen in cephalic presentation.
Fetal movements and cardiac activity appear normal. FHR is 170 bts/min.
Liquor appears adequate for the gestational age.

Int.os is closed. Cervical length is 32 mm.
Placenta is anterior. There is no placenta previa.

Right uterine artery PI is 1.44. Left uterine artery PI is 0.69. Mean uterine artery PI is within normal limits for gestational age.

Growth parameters:

LMP: 21/07/2025

EDD by LMP: 27/04/2026

Period amenorrhea: 19 weeks, 5 days.

BPD: 52 mm
HC: 157 mm
AC: 137 mm
FL: 30 mm
HL: 30 mm

Estimated gestational age by USG: Around 19 weeks.

Estimated foetal body weight- 281 +/- 41 Gms 21 percentile.

Anatomical survey:

No obvious fetal malformation is seen in present examination.

CNS:

The neuroparenchyma appears normal without obvious focal lesion.

The falx is well seen. There is no shift of midline structures.

The ventricular system appears normal.

The fetal spine appears normal without obvious neural tube defect.

Head and neck:

The orbits, nose and mouth appear normal in coronal and profile views.

(I declare that during the examination, I have neither detected nor disclosed the sex of the foetus to any body in any manner.
Not all anomalies can be detected on sonography depending upon various factor like gestational age, fetal position, amount of liquor,
maternal abdominal wall thickness, patient co-operation etc.)

I declare that by undergoing ultrasonography / image scanning etc. I do not want to know the sex of my foetus.
