Sunday - Closed

MAULI DIAGNOSTIC CENTRE

FOETAL ANATOMICAL SURVEY :

| | |
|---|--|
| HEAD: <ul style="list-style-type: none">• Normal in size & shape.• Normal mid line falx & choroid plexus noted.• Normal intracranial translucency seen. | FACE: <ul style="list-style-type: none">• Normal profile & premaxillary triangle, mandibular gap noted.• Nasal bone ossification seen. |
| NECK: <ul style="list-style-type: none">• No any mass detected.• No e/o abnormal cystic space. | CHEST: <ul style="list-style-type: none">• Normal in size & shape.• No obvious pleural effusion noted.• No obvious mass detected. |
| HEART: <ul style="list-style-type: none">• Normal four chambers noted.• Two normal ventricular inflows and outflow tracts noted• No obvious e/o mitral or tricuspid regurgitation noted. | ABDOMEN: <ul style="list-style-type: none">• Single stomach bubble noted on left side.• Normal anterior abdominal wall & cord insertion.• No obvious omphalocele noted.• Urinary bladder seen. |
| SPINE: <ul style="list-style-type: none">• No obvious open neural tube defect. | LIMBS: <ul style="list-style-type: none">• All four limbs seen. |

IMPRESSION: A single live intrauterine fetus with gestational age of 13 weeks noted.

No obvious fetal congenital anomalies are seen at present examination.

Suggest anomaly scan at 18-20 weeks of gestation.

(Please note that all fetal congenital anomalies may not detected by sonographic examination due to technical difficulties related to liquor volume, fetal position & fetal movements.)

- I DR.SANDIP AMTE declare that while conducting ultrasonography/image scanning on MRS. SHRADDHA ULHAS KALE have neither detected nor disclosed the sex of her foetus to anybody in any manner.
