

Prisca 5.1.0.17
Date of report: 15/12/25

Patient data			
Name	Mrs. SABA HASHMI	Patient ID	0772512120049
Birthday	12/12/98	Sample ID	B4243399
Age at sample date	27.0	Sample Date	12/12/25
Gestational age	12 + 2		
Correction factors			
Fetuses	1	IVF	no
Weight	49	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	4.37 mIU/mL	0.96	
fb-hCG	40.01 ng/mL	0.84	
Risks at sampling date			
Age risk	1:852	Crown rump length in mm	56.3
Biochemical T21 risk	1:7116	Nuchal translucency MoM	0.88
Combined trisomy 21 risk	<1:10000	Nasal bone	present
Trisomy 13/18 + NT	<1:10000	Sonographer	NA
		Qualifications in measuring NT	Sonographer
Risk		Trisomy 21	
The graph shows a risk curve that increases with age. At age 27, the risk is below the cut-off line.		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
