

Prisca 5.1.0.17
Date of report: 15/12/25

Patient data			
Name	Mrs. WAJIDA	Patient ID	0482512140260
Birthday	06/02/99	Sample ID	B4090437
Age at sample date	26.9	Sample Date	14/12/25
Gestational age	12 + 5		
Correction factors			
Fetuses	1	IVF	no
Weight	51	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	3.13 mIU/mL	0.61	
fb-hCG	38.41 ng/mL	0.91	
Risks at sampling date			
Age risk	1:874	Gestational age	12 + 3
Biochemical T21 risk	1:2087	Method	CRL Robinson
Combined trisomy 21 risk	<1:10000	Scan date	12/12/25
Trisomy 13/18 + NT	<1:10000	Crown rump length in mm	62
		Nuchal translucency MoM	0.75
		Nasal bone	present
		Sonographer	NA
		Qualifications in measuring NT	Sonographer
Risk		Trisomy 21	
The graph illustrates the risk of Trisomy 21 based on gestational age. The y-axis shows risk levels from 1:10 to 1:10000. The x-axis shows age from 13 to 49. A red region at the top indicates risk above the cut-off. A yellow region in the middle indicates risk below the cut-off but above the age risk. A green region at the bottom indicates risk below the cut-off. A black vertical bar at age 27 shows the patient's risk level, which is below the cut-off.		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
