OBSTETRIC USG (EARLY ANOMALY SCAN) WITH PRE-ECLAMPSIA SCREENING

LMP: 18/09/2025

GA (LMP) : 12 wk 4 d

EDD : 25/06/2026

- Single live fetus seen in the intrauterine cavity in **variable** presentation.
- Spontaneous fetal movements are seen. Fetal cardiac activity is regular and normal & is 167 beats /min.
- PLACENTA: is **grade I, left antero-lateral with lower edge completely covering the os.**
- LIQUOR: is **adequate** for the period of gestation.

Fetal morphology for gestation as described .

- Cranial ossification appears normal. Midline falx is seen. Choroid plexuses are seen filling the lateral ventricles. No posterior fossa mass seen. Spine is seen as two lines. Overlying skin appears intact.
- No intrathoracic mass seen. No TR .
- Stomach bubble is seen. Bilateral renal shadows is seen. Anterior abdominal wall appears intact.
- Urinary bladder is seen, appears normal. 3 vessel cord is seen.
- All four limbs with movement are seen. Nasal bone well seen & appears normal. Nuchal translucency measures 2.0 mm (WNL).
- Ductus venosus shows normal spectrum with positive "a" wave (PI ~ 1.21) .

FETAL GROWTH PARAMETERS

- | | | | | | | | | |
|---|-----|------|----|---|----|-----|---|--------------------|
| ▪ | CRL | 75.2 | mm | ~ | 13 | wks | 5 | days of gestation. |
|---|-----|------|----|---|----|-----|---|--------------------|
- Estimated gestational age is **13 weeks 5 days (+/- 1 week)**. EDD by USG : 17/06/2026
 - Internal os closed. Cervical length is WNL (25.2 mm).
 - Baseline screening of both uterine arteries was done & reveals mean PI of ~ 1.73 (WNL for gestation).

IMPRESSION:

- ↓ Single, live, intrauterine fetus of 13 weeks 5 days +/- 1 week – large for dated ? early conception.
- ↓ Gross fetal morphology is within normal limits.
- ↓ Low lying placenta with lower edge completely covering the os.
- ↓ Mild cervical length shortening is noted (~25.2 mm).

Suggest : Clinical correlation & follow up at 19-20 weeks for target scan for detailed fetal anomaly screening.

Declaration : I have neither detected nor disclosed the sex of the fetus to pregnant woman or to anybody. (It must be noted that detailed fetal anatomy may not always be visible due to technical difficulties related to fetal position, amniotic fluid volume, fetal movements, maternal abdominal wall thickness & tissue ecogenicity. Therefore all fetal anomalies may not be detected at every examination. Patient has been counselled about the capabilities & limitations of this examination.)
