NAME :- MRS. MUBASHIRA KHAN
REF. BY :- DR. S. R. OTIV
DATE :- 17-12-2025

ANTENATAL SONOGRAPHY

LMP : 18-09-2025 (Period of amenorrhoea : 12 weeks 6 days)

A single live intrauterine foetus is seen during this examination.

CRL is approximately 71.2 mms. corresponding to 13 weeks 2 days
E.D.D by sonography : 22-06-2026 (+/-1week)

Foetal cardiac activity is noted. Foetal heart rate 156 beats per minute

Normal nuchal translucency (1.4 mms) Nasal bones appear normal. Single stomach bubble is noted. There is no bowel dilatation. Developing foetal long bones are seen. There is no hydrocephalus presently. Ductus venosus flow appears normal. Three vessel umbilical cord os noted.

Placental is anterior and is not praevia. No retroplacental abnormality is seen.

Liquor is adequate.

Internal os is closed and cervical length is adequate (3.6 cms.)

No adnexal cyst is noted.

The urinary bladder is well distended. No vesical calculus and changes of cystitis is noted.

Right Uterine artery

Resistive Index (RI) : 0.6 Pulsatility Index (PI) : 1.0

Left Uterine artery

Resistive Index (RI) : 0.5 Pulsatility Index (PI) : 1.0

IMPRESSION

Single live intrauterine foetus of 13 weeks (+/-1week) gestation

Please correlate clinically and with double marker tests.

Follow up is suggested at 20 weeks for foetal anomaly scan.

I, DR. MOHIT PATIL, WHILE CONDUCTING ULTRASONOGRAPHY OF MRS. MUBASHIRA KHAN
I HAVE NOT DETECTED OR DISCLOSED THE SEX OF THE FOETUS TO ANYBODY IN ANY MANNER

Dr. Mohit Patil
