Real time B mode obstetric scan reveals:

Sonography of gravid uterus reveals the presence of a single live fetus in variable presentation in present scan.

Fetal heart rate – 150 bpm. Fetal cardiac activity is regular. Active limb and body movements observed.

Placenta: is anterior. Grade- I maturity. Not reaching up to the internal os. No placental separation or retroplacental hematoma.

Amniotic fluid: Volume is normal in present scan. (Deepest pocket / MVP – 4.1 cm).

Cervical length measures 3.5 cm.

No loop of umbilical cord around the fetal neck at present scan.

Foetal Weight: 241 +/- 35 gms.

FOETAL BIOMETRY

| Parameter | Measures /cm | Weeks | Days | Percentile |
|-----------|--------------|-------|------|------------|
| BPD | 3.8 | 17 | 5 | 15.0% |
| HC | 15.4 | 18 | 3 | 33.2% |
| AC | 12.7 | 18 | 2 | 37.4% |
| HL | 2.8 | 19 | 0 | 71.4% |
| FL | 2.8 | 18 | 5 | 47.7% |

Mob.: 8605305536 / 8605475536

FETAL 2D ECHO, USG GUIDED FNAC, 3D/4D SONOGRAPHY, COLOUR DOPPLER

ANOMALY SCAN

CNS:

- The ventricular system is normal. Lateral ventricle measures 5.4 mm.
- Trans cerebellar diameter - 19.8 mm. (Within normal limit).
- Cisterna magna - 4.5 mm. (Within normal limit).
- Nuchal fold measures 2.3 mm. CSP - 1.8 mm.
- Visualized cerebrum, cerebellum and posterior fossa structures appear normal.
- No e/o hydrocephalus is seen. Cavum septum pellucidum is seen.

Cardiac Structures

- Normal situs is seen. Cardiac chambers sizes are normal.
 - Four chambers view and three vessels view are seen.
 - Right ventricular outflow tract and left ventricular outflow tract appears normal.
- (For detailed evaluation of fetal heart fetal echocardiography is suggested between 22-24 weeks).

Abdominal structures

- Fundic bubble appears normal. Visualized bowel loops appear nondilated.
- No e/o any diaphragmatic hernia/omphalocele is seen.

Fetal KUB

- Both the kidneys are normal in size and echotexture.
- **Right kidney measures 1.8 cm. Left kidney measures 1.7 cm.**
- No significant Pyelectasis is seen.
- Urinary bladder is seen. No e/o of urinary bladder overdistension is seen.

Limbs

- Visualized parts of the limbs show normal appearances.
- No e/o club foot is seen.

Miscellaneous structures

- **Nasal bone appears well ossified and measures 5.1 mm.** Visualized face appears normal.
- No cleft lip seen at present.
- 3 vessel umbilical cord visualized.

Doppler - Maternal uterine arteries

| | Right uterine artery | Left uterine artery | Mean PI | Remarks |
|------------------------|----------------------|---------------------|---------|---------|
| Pulsatility Index (PI) | 0.9 | 0.97 | 0.93 | Normal |

FETAL 2D ECHO, USG GUIDED FNAC, 3D/4D SONOGRAPHY, COLOUR DOPPLER

IMPRESSION -

- Single, live, intrauterine Fetus in variable presentation in present scan of 18 weeks 4 days by cEDD.
- No any gross lethal congenital anomaly detected in present scan.

Advice: - Clinical, Quadruple marker correlation / Follow up scan at 22 -24 weeks.

DISCLAIMER:

Not all fetal anatomical abnormalities can be detected on ultrasound examination. The visualization of fetal parts depends on the fetal position, fetal movements and adequacy of liquor. Certain defects may not be visualized during the 2nd trimester. A follow up scan in the early third trimester of late 2nd trimester is advisable. The Present study cannot exclude fetal chromosomal abnormalities because the ultrasound markers for these may not always be evident. Defects such as complex cardiac anomalies like TAPVR, PAPVR, PAPVD, small VSDs, ASDs, evolving conditions etc., lower gastrointestinal abnormalities, abnormalities involving hands, feet, ears, soft tissues etc., may not be detected on ultrasound examination.

* I Mrs. Rupali Adinath Dhawale, declare that by undergoing ultrasonography/image scanning etc. I do not want to know the sex of my fetus.

Signature of pregnant women * *Rupali*

I, DR. ARCHANA GHATE, declare that while conducting ultrasonography/image scanning etc. on Mrs. Rupali Adinath Dhawale, I have neither detected nor declared sex of her fetus to anybody in any manner.
